

Predict.X for Travel

Delivering insights across the Travel Industry

The challenges in capturing all data across a company's travel programme and using it to manage spend & policy effectively are increasingly complex. New data sources are being added both from additional traditional suppliers and also from a new wave of sharing economy companies, such as Airbnb and Uber. How can the travel manager effectively manage in this new environment?

Why Predict.X for Travel?

Predict.X for Travel allows travel managers and directors full visibility into all elements of travel, meetings, events and expense activity. We use Machine Learning and Artificial Intelligence to ensure all data across systems is captured, matched and analysed. The

Prior to using Predict.X, the environment surrounding travel information was highly fragmented and lacked visibility. Although it was possible to gain some visibility on travel behaviour, to do so required considerable time and analyst resource.

Global Purchasing Process/Development Director & Deputy CPO
IT Services Corporation

product provides an integrated reporting suite and dynamic analysis to allow predictive insight.

Key Benefits:
